EDUCATION

National Institute of Technology, Calicut
3rd Year, Computer Science and Engineering

July 2019 - Present

Overall CGPA: 7.27

Tirumala Junior College

Intermediate education

Physics, chemistry, Mathematics

2017-2019

Overall score: 10/10

Sri Chaitanya English medium school

Secondary Education

2017

Overall Score 9.8/10

CERTIFICATIONS

Data Science for Engineers - NPTEL

This course will introduce: R as a programming language, mathematical foundations required for data science, the first level data science algorithms, data analytics problem solving framework, practical capstone case study. Course will also describe a flow process for data science problems (Remembering) ,

Link for the certification : [Certification](#).

Algorithms, Data Collection, and Starting to Code - Coursera This specialization is designed to let you explore computational thinking and C programming topics, applying those concepts to develop solutions to a variety of practical problems. Link for the certification : [Certification](#)

Neural Networks and Deep Learning - Coursera In this course on Deep Learning , you will study the foundational concept of neural networks and deep learning. By the end, you will be familiar with the significant technological trends driving the rise of deep learning; build, train, and apply fully connected deep neural networks; implement efficient (vectorized) neural networks; identify key parameters in a neural network's architecture; and apply deep learning to your own applications. Link for the certification : [Certification](#)

PROJECTS

Share NITC - Software Engineering Laboratory

An application for NITC student community for buying and selling second hand items. All the steps involved during the stages development follows standard conventions of software engineering principles. GitHub Link : [Share-NITC](#)

Image Recognition - Neural Network model

In this project we have worked on a deep neural network model which helps in classifying whether an image has a cat in it or not. GitHub Link : [Deep-Neural-Network](#)

Clima - A climate App

This is an app which fetches the details of weather at a specified location or user's location by using API's from the website www.openweathermap.org. GitHub Link : [Clima](#)

SKILLS

C programming, Java, Data Structures and Algorithms, Flutter, OOPS, Problem solving, Neural Networks.
